* Indicates required question

1. Email *

2. Roll Number *

3. Password *

Question

4. Consider the link graph. First, construct the L , the link matrix, as discussed in Section 5.5 on the HITS algorithm. Then do the following: 1 point
1. Start by assuming the hubbiness of each node is 1; that is, the vector $\mathbf{h}$ is (the transpose of) $[1, 1, 1, 1]$.
 2. Compute an estimate of the authority vector $\mathbf{a} = L^T \mathbf{h}$.
 3. Normalize $\mathbf{a}$ by dividing all values so the largest value is 1.
 4. Compute an estimate of the hubbiness vector $\mathbf{h} = L \mathbf{a}$.
 5. Normalize $\mathbf{h}$ by dividing all values so the largest value is 1.

Repeat steps 2-5.

Now, identify in the list below the true statement about the final estimates.

Check all that apply.

- ☐ The final estimate of the hubbiness of 1 is 1.
- ☐ The final estimate of the hubbiness of 3 is $1/8$.
- ☐ The final estimate of the authority of 2 is $3/5$.
- ☐ The final estimate of the authority of 4 is $1/5$.
