ICE 7.1

Aman Gupta • Feb 14, 2025 (Edited Feb 21, 2025)

8/8

1. (1 mark). It is believed that distribution of keys in a public-key cryptosystem is trivial, and is therefore preferred over symmetric-key cryptosystems. Is this true or false?

- True
- **False (correct)**
- Cannot say much

2. (1 mark) In the context of public-key cryptosystems, which of the two keys, the one used to encrypt, e , or the one used to decrypt, d , is made public if the objective is to provide for authentication?

- Either e or d can be made public
- Encryption key, e
- **Decryption key, d (correct)**

3. (2 marks) This is about the RSA cryptosystem with $p=5$, $q=7$. If the encryption key $e=5$, then what is decryption key d ? Hint: check out all the possible answers listed below.

- 30
- 19
- **5 (correct)**
- None of the above

4. (2 marks) Continuing with the above question, if encryption key $e=5$, and message $M=4$, then what is the cipher C ?

- **9 (correct)**
- 16
- 30
- None of the above

5. (2 marks) continuing with the above question, if cipher $C=9$, and decryption key $d=5$, then what is M ?

- 5
- **4 (correct)**
- 9
- None of the above
