## Untitled Section

4. Suppose we have the following relations:

1 point

$R(A, B) = \{(0, 1), (1, 2), (2, 3)\}$

$S(B, C) = \{(0, 1), (1, 2), (2, 3)\}$

and we take their natural join by the map-reduce algorithm. Apply the Map function to the tuples of these relations. Then, construct the elements that are input to the Reduce function. Identify all the correct elements in the list below.

*Check all that apply.*

☐ (0, [(S,1)])

☐ (2, [(R,1), (S,3)])

☐ (0,(S,1))

☐ (3, [(R,2)])
