## Question

Consider the following matrix:

**Row, C1, C2, C3, C4**

R1, 0, 1, 1, 0

R2, 1, 0, 1, 1

R3, 0, 1, 0, 1

R4, 0, 0, 1, 0

R5, 1, 0, 1, 0

R6, 0, 1, 0, 0

Perform a minhashing of the data, with the order of rows: R4, R6, R1, R3, R5, R2. Which of the following are the correct minhash value of the stated column? **Note:** we give the minhash value in terms of the original name of the row, rather than the order of the row in the permutation. For an example if the output is 3rd row, you shall output row label R1. These two schemes are equivalent, since we only care whether hash values for two columns are equal, not what their actual values are.

#### 4. Options

1 point

*Check all that apply.*

- ☐ The minhash value for C3 is R4
- ☐ The minhash value for C1 is R5
- ☐ The minhash value for C3 is R1
- ☐ The minhash value for C1 is R2
