Question

Suppose we have an LSH family h of $(d1, d2, .6, .4)$ hash functions. We can use three functions from h and create the AND-construction to form a $(d1, d2, w, x)$ family. Similarly, we can use two functions from h and create the OR-construction to form a $(d1, d2, y, z)$ family. (Note that it is not AND-OR family construction). Calculate w , x , y , and z , and then identify all the correct options.

4. Options

1 point

Check all that apply.

- ☐ $w=.216$ $y=.84$
- ☐ $x=.064$ $z=.64$
- ☐ $x=.064$ $y=.936$
- ☐ $w=.36$ $z=.64$
